Energy Policy

We, Teekanne Düsseldorf, associate sustainable corporate success with the continuous and long-term optimization and improvement of resource consumption and energy efficiency in all processes of the company, as this is the basis for climate-neutral and environmentally conscious growth in the company.

To implement and control this goal, we are committed to implementing, maintaining and further developing an energy management system in accordance with DIN EN ISO 50001 in the currently valid version, which focuses on the following points:

- Determination, definition and regular evaluation of the energy aspects in the company and recording of the necessary energy data.
- Continuous improvement of energy-related performance in compliance with all legal requirements as well as all other relevant requirements regarding energy use, energy consumption and energy efficiency.
- Ensuring the availability of financial and structural resources as well as information to achieve strategic and operational goals.
- Ensure that all relevant employees are involved in the implementation and execution of the energy management system and that the content and responsibilities are documented and communicated.
- Support the acquisition of energy efficient products / services that contribute to the improvement of energy related performance.
- Support activities to improve energy-related performance when redesigning processes, production facilities, sites, etc.

The energy policy serves as a guiding principle for action and provides the framework for setting and reviewing strategic and operational energy targets.
